

Do you also have highly weather-proof coatings for my cladding panels in the coastal area?

In the course of time, wind, weather, squalls and salts in the air badly affect particularly façades, windows and doors. Fairly often you will see after a few years already that the protective varnish is damaged.

Here, Hillebrand provides the requested problem solution by its aesthetic, highly weather-proof powder coatings. The diverse color and product spectrum stands out for its robust weathering resistance. By means of the surface finish, an optimal hue can be achieved for any taste.

The special coatings from Hillebrand have been developed for high demands. They prove themselves by their long durability.

For 45 years already, Hillebrand Coating Technologies is a competent and reliable partner in the international object business. All customer's orders are completely executed logistically. The material is chemically pretreated and coated in conformity with all national and international standards and packed according to the requirements.

The complete service spectrum ranges from sawing accurate to size up to commissioning, insulating, foliating and packaging of the components.

No limits are set to the coating color selection. Special features such as bronze and structural paints are part of the wide Hillebrand product spectrum.

Leading system suppliers and manufacturers of high-quality doors and windows have recognized this and belong to the circle of Hillebrand customers for a long time already.

OUR COMPANY

OUR INNOVATIONS

Each staff member is fully respected as a personality and partner in the production process.

In our company, everybody can show his strong points and make his contribution to common success. Thus he becomes ready to think for himself and to assume personal responsibility. Of our more than 100 staff members, every second one is employed by our company for more than ten years already. They come from different countries, have quite different qualifications and join forces now.

Our production concentrates on the fields of automotive industry, construction industry, electrical industry as well as mechanical engineering. The matrix below represents our performance spectrum at a glance.

Hillebrand Coating Technologies is one of the leading companies in the field of organic coatings.

For all customer requirements, Hillebrand offers standard solutions or customized system solutions. Apart from the classical powder coating, the spectrum of surface refinement also comprises the range of liquid varnishes on nano base as well as the achievement of metallic surfaces by means of vacuum technology.

The latest developments are multifunctional layers on the basis of coating powders and a special anchoring technology of coating powders on nonconducting synthetic materials as well as anticorrosive systems on aluminum and magnesium diecasting.

Hillebrand has 45 years of experience in surface refinement and is able to solve arising problems in many applications.
